

Prakhar Pandey

Software Engineer | Frontend & Cross-Platform Development

Gurgaon, India · +91-8383818145 · pandey.prakhar5002@gmail.com · linkedin.com/in/prakhar-pandeeey-97532915a · github.com/Prakhar5002

PROFESSIONAL SUMMARY

Software engineer with 4 years of experience building and shipping production web and cross-platform mobile applications, specializing in React, React Native, and TypeScript. Strong across the frontend stack: component architecture, state management, real-time data, authentication, and API integration, with hands-on depth in native Android (Kotlin), payments, and release engineering. Comfortable owning a product surface end to end, from architecture and UI through deployment and production support. I ship reliable, maintainable frontends and tend to be the one who picks up the harder problems around performance, security, and payments.

CORE TECHNICAL SKILLS

Languages: TypeScript, JavaScript (ES6+), Kotlin, HTML5, CSS3, Java (basic)

Frontend (Web): React.js, Redux Toolkit, TanStack React Query, React Router, responsive UI, WCAG accessibility, Webpack

Mobile: React Native, Expo, Expo Router, Android, iOS, native module bridging

Architecture & State: Component / modular architecture, Redux Toolkit, TanStack Query, Zustand, Context API, MMKV

APIs & Data: REST, GraphQL / Apollo Client, Axios

Real-time & IoT: Firebase Realtime DB, OneSignal, MQTT

Auth & Security: OAuth2 / OIDC, Keycloak, PKCE, SSL public-key pinning, device integrity, Expo SecureStore

Payments: Razorpay, idempotent and exactly-once payment flows

DevOps & Release: CI/CD, Expo EAS, Fastlane, Git / GitHub, Play Store & App Store, GitHub Pages

Testing & Monitoring: TypeScript strict, Jest, manual QA, Sentry, Microsoft Clarity

Practices: Agile / Scrum, code review, sprint planning

PROFESSIONAL EXPERIENCE

Smartworks · Gurgaon

Software Engineer, Frontend & Mobile

May 2024 – Present

- Own the frontend architecture of SW Tickets, the internal support app, which I built from an empty repo. The core is a workflow engine driven by the backend: the server decides which status transitions and form fields are valid, and the app renders whatever it's told, so ops can change the ticket workflow without shipping an update. Also built the Keycloak login (WebView + PKCE) and a single-flight token refresh that queues in-flight requests instead of firing one refresh per call. Live on Play Store and App Store.
- Wrote the face recognition for our meeting-room tablet in native Kotlin with OpenCV (blink, texture and motion checks for liveness) and bridged it into the React Native app, so check-in happens on-device with no cloud round trip. Moved the live room-status sync off Kafka onto Firebase and rewrote the read to pull only a rolling window of bookings, which cut Firebase reads by roughly 80–90%. I measured it and wrote it up for the team.
- On Workctrl, our main workplace app (booking, visitor, food ordering, ticketing), I own the payment and security work: idempotency keys and exactly-once handling so a UPI payment can't double-charge when the user bounces back from the payment app, plus SSL pinning, root and emulator detection, and a native patch to a jailbreak-detection library that was crashing on launch.
- Took both apps through the Expo 53 / RN 0.79 upgrade and the 16 KB page-size alignment Google now requires for the Play Store. Set up EAS builds with OTA channels for staging and production, and moved release signing over to Fastlane.
- Contributed to Smart Setup, our IoT device-onboarding app: the concurrent device discovery (mDNS plus subnet scan) and parts of the Sonoff provisioning flow. Review most of the team's frontend PRs and set our TypeScript and lint conventions.

Infinity Soft Systems · Noida

React Native Developer

December 2022 – March 2024

- Built two consumer apps end to end. QU App is a shared-room Spotify voting app, where everyone in a room votes on the next song and the votes sync live over Firebase. Most of the work was the Spotify OAuth refresh flow and keeping the UI usable when their API rate-limits you.
- NoWorriesApp is a mood and worry tracker. I focused on keeping it smooth and cutting repeat network calls with caching and request dedup, and shipped it to Play Store. I also handled the client communication, which taught me as much as the code did.

iFlair Web Technologies · Ahmedabad

Frontend Developer (React & React Native)

February 2022 – November 2022

- Built the frontend for Clinicards, a patient health platform for a Netherlands client, on both React (web) and React Native (mobile), consuming an AWS AppSync / GraphQL backend. Built the symptom-tracking flows and the recovery trend charts with Victory Native. The hard part wasn't the charts, it was making medical data readable for non-technical patients on a small screen. This was the first time I had to seriously handle accessibility (keyboard and focus order) and work across time zones with a client.

Shantikunj · Haridwar

Junior Software Engineer

May 2021 – January 2022

- First job. Built a video-on-demand and live-streaming app around the YouTube API. This is mostly where I learned React and React Native properly and what shipping to real users actually takes.

KEY PROJECTS

SW Tickets — React Native, TypeScript, Keycloak/PKCE, S3

Internal support platform I built and own. Backend-driven ticket workflow, role-based UI from one codebase, dynamic multi-step forms with S3 uploads. Live on Play Store and App Store.

Meeting Room Tablet — React Native + native Kotlin, OpenCV, Firebase

Kiosk with on-device face recognition and liveness in native Kotlin, bridged into React Native. Owned the Kafka-to-Firebase migration and cut Firebase reads by ~80–90%.

Workctrl — React Native, Redux Toolkit, Firebase, Razorpay

Enterprise workplace app (room booking, visitor management, food ordering, ticketing). I own the payments (idempotent, exactly-once) and security hardening (SSL pinning, device integrity). Live on Play Store and App Store.

Smart Setup — React Native, Expo Router, MQTT

IoT device-onboarding app for smart-building campuses. Contributed the concurrent device discovery (mDNS + subnet scan) and parts of the Sonoff provisioning flow.

Clinicards — React (web), React Native, GraphQL

Cross-platform patient health app for a Netherlands client. Built symptom-tracking flows and data-visualization charts on web and mobile against a GraphQL backend. Live on Google Play.

QU App — React Native, Firebase, Spotify API

Real-time shared-room Spotify voting app. Live vote sync over Firebase and Spotify OAuth with rate-limit handling.

NoWorriesApp — React Native

Mood and worry tracker with response caching and request dedup. Shipped to Play Store.

EDUCATION

Master of Computer Applications (MCA)

Dev Sanskriti Vishwavidyalaya, Haridwar

2019 – 2021

Bachelor of Computer Applications (BCA)

Dev Sanskriti Vishwavidyalaya, Haridwar

2016 – 2019
